FRONTEND DEVELOPER

Jan-2023-Current

Creating a Dynamic Websites From Scratch Using React.js :-

- Developed a dynamic and responsive website from scratch using React.js.
- Integrated with various data sources and API's to fetch and display real time content , enhancing the website's functionality.
- Applied performance optimization techniques such as code splitting and lazy loading to improve application loading times .
- Implemented Redux Toolkit and Thunk Middleware for state management and asynchronous API's call.

Technology Used : React.js , Redux Toolkit , Javascript , HTML5 , Tailwind , CSS ,SASS , Thunk , Axios , Github .

Project

Youtube Clone

React.js , Javascript , Redux-Toolkit , Tailwind , Thunk , React-Router

SEAMLESS INTEGRATION WITH YOUTUBE API

[Github](#)

- Debouncing and Caching : Implementing debouncing ensures a smoother user experiences by reducing unnecessary API calls , while caching optimizes performance by storing and retrieving frequently requested data ultimately enhancing the responsiveness.
- Design a user-friendly interface for discovering new videos based on categories, trending content, and personalized recommendations.
- Implement features such as likes, dislikes, and share to enhance user interactivity

Movies App

React.js , Javascript , Redux-Toolkit , Tailwind , Thunk , React-Router

USING MOVIE DATABASE (TMDB API)

[Github](#)

- Designed and implemented user authentication features , allowing seamless login and logout functionalities to enhance user security and personalize the movie watching experience.
- Implemented robust error handling and loading states using Redux to provide a smooth and error-free user experience , even in scenarios with slow network conditions or API failures.
- Implemented Dynamic client-side routing using React Router DOM to create a seamless . single page application experience .

Swiggy App Clone

React.js , Javascript , useContext , Tailwind , React-Router

- Implement a secure user authentication system using React components for user registration and login.
- Design a user-friendly interface to browse and search for restaurants based on location, cuisine, or other filters.
- Develop React components to showcase restaurant menus with detailed item descriptions, prices, and images.
- Utilize React components to manage the presentation and interaction with user-generated content.
- Allow users to add items to their cart and view an updated summary of their selections.
